Regina Manlift Ticket

Regina Manlift Ticket - The Manlifts and Elevated Platforms course provides training on the regulations, rules and right application of safe operating procedures and work practices included in daily activities for those who work with this machinery. The program has been designed for individuals who are actively involved in these activities or individuals who have a basic knowledge of this machine.

During the last couple of decades, aerial platforms and manlifts have become a common sight on construction job sites and in industrial maintenance applications. These machines provide an easy way to lift staff near what must be carried out on a stable platform apparatus, allowing workers to perform tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

The manlift is like other industrial tools in that they are safe if utilized correctly. Because they lift staff above floor or ground level, accidents can easily happen and this could cause serious injuries or death for both the operators of the manlift and any passerby who may be unlucky enough to be standing below.

There are a variety of kinds of manlifts. Most fall into 1 of 2 categories: the articulating boom lift, which has the capability of both horizontal and vertical movement and the scissors lift, which is capable of moving up and down.
