

Regina Boom Lift Training

Regina Boom Lift Training - Aerial platforms or elevated work platforms are devices that enable workers to perform duties and tasks at elevated heights which will not be otherwise accessible. There are different aerial lifts on the market to carry out different applications under various site conditions. If operated carelessly, elevated work platforms could cause fatality or serious injury. The most common reasons for related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators must be completely trained in techniques to be able to avoid accidents while operating lifts.

Aerial Lift Safety course is intended for those who need to operate the devices more safely and effectively. The course provides thorough instruction about the most used lifting devices within the business.. Types of lift covered include scissor, articulating and boom supported aerial lifts. The video presents the proper methods operators must follow. Instruction focuses on pre-operational inspection, protection against falls, stability of the device and safe driving procedures.

The course addresses equipment reliability and employee safety. All instructional materials are compliant with state, government and provincial agency regulations and requirements. Training techniques and course management would be taught. The trainer would also know the technical aspects of aerial lift safety.

Both classroom training and practical training are components of the Aerial Platform/Boom Truck Training course. Both sessions should be finished successfully for the participant to be given a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms totally beyond the base of the machine. The theoretical training part is practically the same for both kinds. The practical training part can be finished sooner if only one type of equipment is utilized.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to efficiently use elevating work platforms whilst decreasing the possibilities of an expensive accident in the workplace. Trainees will review of applicable rules and company policies, talk about Due Diligence, study Criminal Negligence and consequences to trainers, employers, workers and supervisors. Participants would review machine features, operating procedures, stability, parking and charging/fueling procedures. Site-specific safety concerns would be addressed.
