

Regina Forklift Instructor Training

Regina Forklift Instructor Training - Forklift Instructor training certification is recommended for forklift operators who want to become instructors. To qualify for forklift instructor training, operators must be able to prove they possess a high level of knowledge about forklift equipment and have good lift truck driving skills. Instructor training typically is held at an equipment sales facility or at the campus of a junior college, community college, or vocational or technical school. Forklift manufacturing companies sometimes offer practical, hands-on, train-the-trainer courses.

Whether offered in a classroom setting or at a manufacturing business facility, registering for the program would involve paying a tuition fee, and buying books, manuals or other materials. Program length varies depending on the course. Participants usually must have satisfactory test scores, participation and demonstration during the course to be able to qualify for trainer certification.

Instructor programs normally assume that participants have past experience as forklift operators. The focus of the instructor training is on topics like ethics, teaching techniques, curriculum design and safety issues. Those participating would learn how to demonstrate to their students various aspects of lift truck use, such as moving and stacking materials or navigating the lift truck in narrow aisles. Those participating will learn how to evaluate student's written tests and demonstrations of their forklift operating skills. The course objective is to be able to prepare trainers to be able to create and implement their own forklift training programs.

Some self-study of the equipment and guidebooks is needed. Trainers would be expected to create their very own curriculum, that meets regulation guidelines in terms of subjects presented, such as Operation and Safety. For example, the subject of Safety must include an understanding of how to identify possible dangers. The topic of Operation comprises instruction about controls and instruments, maneuvering and steering, and connecting and using the fork.
